---	--

	Web Server: XAMPP Server Languages: PHP, HTML , Java Script
Online Money System As a part of curriculum	Description: The system that provides facility to get loan on mortgage on providing the softcopies of documents after verifications. Responsibilities: Involved in each phase of project starting from requirement gathering, analysis, design, coding, testing. Developing Tool: Microsoft Visual Studio Database: MS SQL Server 2005 Web Server: IIS Server Languages: Visual C#

DETAILED DESCRIPTION

- Online Money System was a system developed by team as a group project during my studies of bachelors' as a part of curriculum. In this project we worked as a team and we used Microsoft Visual Studio as a development tool. we divided the project in different phases and after started development. I was mainly responsible for coding and designing. we used MsSQL server as a database and IIS sever for testing the functionality.
- After finishing my bachelors' degree, As per mentioned in project details section I have been working with a company as a trainee developer to develop a web based ERP system. Over there as part of project requirement I used PHP and HTML as scripting language. The project was divided in different modules. I was involved in all phases of development of Purchase and Invoice module of the system. We as a team used Macromedia Dreamweaver as a development tool and MS SQL server 2005 for database. Javascript and CSS were used for validation and design puspouse of the system. XAMPP server was used to test the working functionality of the system.
- As a freelance developer I have developed a project called online question bank. That was an online system which helps its users to prepare themselves for different competitive exams. The system was including facility of giving practice test and get scores of the test. The system was originally divided into two parts users and admin. Admin had functionality of uploading new quizzes and new material for preparation, while users can evaluate their knowledge by different tests. It was developed using PHP and HTML as scripting language. For validation of the system from user side javascript was used. CSS was used to create design of the system. MySQL was used as backend of the system. the system was fully developed using different phase of software development lifecycle.
- As a part of curriculum during my studies of Masters' Degree I have developed a website for a company which works in import-export business. For that I was only one who was working on that project. I followed all the phases for SDLC step by step. In that project also I was allowed to use any development tool. so I used PHP as scripting language and MySQL as back end. I had done designing and coding. At the time of testing I generated test cases and matched their results with expected results and made changes to the code where the result was not desired.

WORK EXPERIENCE

- **Dixons Retail Plc. - London,UK.** [May-2012 to Jul-2014]

I was working with Dixons Retail Plc as a tech support executive. Main function of job was to troubleshoot any software related issues with the electronic gadgets. It was mainly including system updating, software malfunction and troubleshooting.
