4. Project: - nPhase (Verizon)

Single Interface to the M2M World nPhase is wholly owned by Verizon, providing advanced Machine to Machine (M2M) services to the world's leading wireless operators such as Verizon and Vodafone, and enterprise customers with the most demanding needs for data reliability, coverage, security and innovation in M2M. Industries served include transportation/construction, utilities, healthcare, retail industrial, financial services, consumer electronics and government. nPhase leverages the global leadership in advanced connectivity technologies provided by Qualcomm, the industry leading network and channel provided by Verizon Wireless, and over ten years of experience as an M2M pioneer to lead the advancement of M2M.

Responsibilities

- Enhancing the application based on client requirements.
- Fixing the issues and releasing the code on regular basis.

C#
.NET
ASP.NET
Ado.net
WCF

5. Project: - RSAM (USA)

Rsam offers the most intuitive and flexible solutions to successfully manage an organization's unique risk, compliance and security needs quickly. Rsam technology automates processes and transforms data into intelligence, allowing organizations to minimize risk exposure, maintain compliance and gain efficiencies that optimize business performance and decreases the overall cost of compliance. Rsam allows you to automate and manage governance, risk and compliance processes across the entire enterprise, Leverage Rsam GRC to create a central risk repository delivering unparallel visibility, intelligence, and control of your organizations risk and compliance posture. Modular solutions allow for a phased approach to building GRC programs quickly and sustain them with fewer resources and without the need for costly professional services.

Responsibilities

- Worked on Manage module.
- Used Infragistics web controls.
- Used JavaScript for client side validations.
- Used Agile Scrum methodology for the implementation.
- Providing solutions to Relational Security Corporation by enhancing application according to their requirement.

Visual Studio 2010
SQL Server 2008

7. **Project:** - Noble Grossart Ltd, UK

Globus is a back office HTTP solution used for producing customer invoices and sales commissions. Clients and Employees timesheets are maintained through this Globus system. Commissions for recruiters and salespeople are generated and individual commission statements are available to the employees through Globus.

This system maintains all the details of beneficiary types, pay periods, commission schedules, bill pay units and invoice cycles. It also maintains all the information about the employees who are working currently and also the people who worked for the company.

Globus also maintains the information about the employee client relationship like which employee is working for which client. Employee will enter the time for which he worked in hour's format. The invoice manager checks the time sheet and generates invoice for that period.

Responsibilities

- Worked on Waterfall methodology in implementing the application.
- Used Asp.net validation controls for validating the pages.
- Worked on Sql Server stored procedures and views.
- Used Normalization in creating the table structures.
- Maintaining the application properly by rectifying the problems and introducing new things regularly based on the requirement.

Asp.Net

C#

Ado.net

Visual Studio 2008

9. Project: - Automate

Automate is a web application designed by keeping in view of the various customer invoices that are maintained at automobile service center. An automobile center which deals with hundreds of vehicles daily where in people need a system which quickly provides services which could enhance the day to day activities of the service center with efficiency and correctness.

Automate is a user friendly GUI application that will automate different activities involved in the day to day activities of QSC (Quick Service Center). The system will help in reducing the time and effort in preparation of quotation invoices and reports. It provides a error free generation all the reports to provide security to the different users of the system.

Responsibilities

- Worked on Waterfall methodology in implementing the project.
- Worked on Asp.net controls and JavaScript for validations.
- Worked on fixing Client issues by interacting with them.
- Providing programming support in development of web pages using Asp.Net.
