**SKILLS:****Energy Data Management (EDM)**

Creation of Business Master Data & Technical Master Data in SAP IS-U , The Energy Data Repository is a central, company-wide database where can store all of a company's energy-related data. This mainly refers to data that can be entered in constant time intervals (for example, measured values every 15, 30, or 60 minutes). However, can also store meter readings in the database.

- Settlement and Schedule Management

Distributors can carry out settlement for suppliers that make up part of their total load. Energy Data Management includes the synthetic and analytical procedures as standard in accordance with the Goa Electricity Department These functions also form the basis for determining overtake and undertake amounts as well as for subsequent billing by the distributor. Suppliers can use Energy Data Management to automate the creation and sending of schedules, for example.

- Billing Profiles

Can bill profiles (measured load shapes, for example) using Real Time Pricing. Can execute billing for all contract types that refer to the profile data. For example:

- Energy supply
- Grid usage
- Billing overtake and undertake amounts
- Settlement
